Contents

1	Basic Nmap Commands	2
1.1	Service and Version Detection (-sV)	2
1.2	Default Script Scan (-sC)	3
1.3	OS Detection (-O)	4
1.4	Aggressive Scan (-A)	5

This document shall contain everything I have learned so far about nmap. I must keep it up-to-date because I feel a bit lost in this cybersecurity journey to be frank.

1 Basic Nmap Commands

1.1 Service and Version Detection (-sV)

This is the Service Detection flag (*yes; -sV is a single flag, not a combination of both s AND V*), which will tell you the name and description of the identified services.

Service Version Detection

```
$ sudo nmap -sV {target_IP}

Starting Nmap 7.80 ( https://nmap.org ) at 2025-03-28 06:27 GMT
Nmap scan report for 10.10.171.202
Host is up (0.00011s latency).
Not shown: 994 closed ports
PORT      STATE SERVICE      VERSION
7/tcp     open  echo
9/tcp     open  tcpwrapped
13/tcp    open  daytime?
17/tcp    open  qotd?
22/tcp    open  ssh          OpenSSH 9.6p1 Ubuntu 3ubuntu13.5 (Ubuntu Linux; protocol 2.0)
8008/tcp   open  http         lighttpd 1.4.74

2 services unrecognized despite returning data. If you know the
service/version, please submit the following fingerprints at
https://nmap.org/cgi-bin/submit.cgi?new-service :
# [Detailed fingerprint data omitted for brevity]

MAC Address: 02:89:EC:B7:74:EF (Unknown)
Service Info: OS: Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results
at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 14.00 seconds
```

1.2 Default Script Scan (-sC)

I sometimes use this one instead of `-sV` because it runs *default scripts*¹, which can give out additional information depending on the services running on the target. You can see a comparison in outputs between the two flags in the two boxes below.

Default Script Scan

```
$ sudo nmap -p- -sC {target_IP} # Do you notice how I had to scan all ports, not
just the top 1000 most common?

Starting Nmap 7.80 ( https://nmap.org ) at 2025-03-28 09:22 GMT
Nmap scan report for 10.10.219.233
Host is up (0.00024s latency).

993/tcp   open  ssl/imap     Dovecot imapd
995/tcp   open  ssl/pop3     Dovecot pop3d
MAC Address: 02:DD:7B:88:3D:75 (Unknown)
Service Info: Host: debra2.thm.local; OS: Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results
at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 13.00 seconds
```

1.3 OS Detection (-O)

Nmap sends a series of TCP and UDP packets to the remote host and examines practically every bit in the responses.

OS Detection Scan

```
$ sudo nmap -O {target_IP}

Starting Nmap 7.95 ( https://nmap.org ) at 2025-03-28 18:41 +03
Nmap scan report for # {redacted}
Host is up (0.0044s latency).
Not shown: 994 closed tcp ports (reset)
PORT      STATE SERVICE
21/tcp    filtered ftp
22/tcp    filtered ssh
23/tcp    filtered telnet
53/tcp    open  domain
80/tcp    open  http
8022/tcp  filtered oa-system
MAC Address: # {redacted}
Device type: general purpose
Running: Linux 3.X|4.X|5.X
OS CPE: cpe:/o:linux:linux_kernel:3 cpe:/o:linux:linux_kernel:4
       cpe:/o:linux:linux_kernel:5
OS details: Linux 3.10 - 4.11, Linux 5.10 - 5.13
Network Distance: 1 hop
```

1.4 Aggressive Scan (-A)

What if you can have both **-O**, **-sV** and some more in one option? That would be **-A**. This option enables OS detection, version scanning, and traceroute, among other things.

Aggressive Scan

```
$ sudo nmap -A {target_IP}

Starting Nmap 7.80 ( https://nmap.org ) at 2025-03-28 09:21 GMT
Nmap scan report for 10.10.219.233
Host is up (0.0062s latency).
Not shown: 991 closed ports
PORT      STATE SERVICE VERSION
