Nmap Cheatsheet

Contents

> This document shall contain everything I have learned so far about nmap. I must keep it
> up-to-date because I feel a bit lost in this cybersecurity journey to be frank.

1   Basic Nmap Commands

1.1   Service Version Detection (-sV)

This is the Service Detection flag *(yes; `-sV` is a single flag, not a combination of both `s` AND `V`)*,
which will tell you the name and description of the identified services.

Service Version Detection

```
$ sudo nmap -sV {target_IP}

Starting Nmap 7.80 ( https://nmap.org ) at 2025-03-28 06:27 GMT
Nmap scan report for 10.10.171.202
Host is up (0.00011s latency).
Not shown: 994 closed ports
PORT     STATE SERVICE     VERSION
7/tcp    open  echo
9/tcp    open  tcpwrapped
13/tcp   open  daytime?
17/tcp   open  qotd?
22/tcp   open  ssh         OpenSSH 9.6p1 Ubuntu 3ubuntu13.5 (Ubuntu
    Linux; protocol 2.0)
8008/tcp open  http        lighttpd 1.4.74

2 services unrecognized despite returning data. If you know the
    service/version, please submit the following fingerprints at
    https://nmap.org/cgi-bin/submit.cgi?new-service :
# [Detailed fingerprint data omitted for brevity]

MAC Address: 02:89:EC:B7:74:EF (Unknown)
Service Info: OS: Linux; CPE: cpe:/o:linux:linux_kernel

Service detection performed. Please report any incorrect results
    at https://nmap.org/submit/ .
Nmap done: 1 IP address (1 host up) scanned in 14.00 seconds
```

1.2   Default Script Scan (-sC)

I sometimes use this one instead of `-sV` because it runs *default scripts*[1], which can give out additional information depending on the services running on the target. You can see a comparison in outputs between the two flags in the two boxes below.

Default Script Scan

```
$ sudo nmap -p- -sC {target_IP} # Do you notice how I had to scan all ports, not
    just the top 1000 most common?

Starting Nmap 7.80 ( https://nmap.org ) at 2025-03-28 09:22 GMT
Nmap scan report for 10.10.219.233
Host is up (0.00024s latency).
Not shown: 65526 closed ports
